Tevron's Automation, Load Testing and Monitoring Solutions are more powerful and flexible with new Visual Studio integration - CitraTest, CitraTest APM, CitraTest VU

QA, DevOps and IT teams standardized on Visual Studio can seamlessly test and monitor application performance for all architectures, all deployment models

Nashua, NH. USA – Feb 19, 2018 – Tevron, the leader in IT performance and end-to-end monitoring and testing solutions, today announced immediate availability of new Visual Studio extension for CitraTest, CitraTest APM and CitraTest VU. Tevron's CitraTest suite of test and monitoring solutions can simulate and measure user interactions with any application accessible from any Windows PC or VM, just as customers would experience them, to validate application quality, reliability and predictability. Tevron scripting functions are easy to understand and correspond to real user actions (Move Mouse, Click on Image, Double Click on Image, Wait For Image, Keystroke, Verify Text, Read Text, etc.). Now with the new CitraTest Visual Studio Extension (CTVSE), Tevron's automation, load testing and monitoring scripts can be directly built in the Visual Studio environment.

"We are so excited to blend the power of CitraTest® proprietary image and optical character recognition technology with Visual Studio" said Jay Labadini, Vice President of Tevron. "Now, power users and organizations using Visual Studio can rely on Tevron and the full features available in Visual Studio and .NET environments including Visual Studio Intellisense to further accelerate and simplify script development and reduce time to market".

Team's requiring less advanced scripting can continue to automate user actions with the existing intuitive point-and-click scripting wizard, while advanced users can seamless add more flexibility and power to their scripts with CTVSE and standardize on Visual Studio. With Tevron's solutions the same scripts can be used for functional testing, performance testing, regression testing and proactive performance monitoring to streamline operations, ensure cross-functional alignment and save time.
