

One of the largest energy companies in the United States, Selects Tevron for its Citrix Load & Performance Testing

Topic: Performance & load testing for all Citrix environments with CitraTest VU

Nashua, NH. USA – November 7, 2014 – Tevron, the leader in IT performance and end to end monitoring & testing solutions, today announced one of the largest energy companies in the United States, with approximately \$13 billion in annual revenues, and over \$36 billion in assets deployed CitraTest VU (<http://tevron.com/load-testing-citratest-vu.aspx>) for their Citrix performance & load testing requirements. The company provides a wide range of energy-related products and services to its customers.

"Organizations that leverage Citrix technology are unable to non-intrusively load test their applications using traditional, protocol based load testing tools. Through the use of our powerful & unique technology, every application hosted via every version of Citrix (XenServer, XenApp, XenDesktop, XenClient) can be tested under real user load before organizations go live with a new build, roll out a new application, or upgrade to new version of Citrix." – **Jay Labadini, VP of Tevron.**

Moreover, Agile development methodologies have drastically increased the velocity of release cycles, leaving little time to test. Therefore, it's imperative to automate performance testing to keep up with rapid development cycles. IT professionals looking to boost application quality within MTS, Citrix or RDS environments are encouraged to look for a performance and load testing solution designed to rely on advanced intelligent image recognition capabilities – automatically built into every test script – to replicate, test and measure any real world transaction using the actual client interface. And this is exactly what CitraTest VU delivers.
