Tevron Announces Full Support for Google Chrome for its flagship End-To-End Monitoring & Testing Solutions.

Tevron Announces Full Support for Google Chrome for its flagship End-To-End Monitoring & Testing Solutions.

Nashua, New Hampshire, June 2, 2009 – Tevron, a global provider of Testing, APM & business service monitoring solutions, today announced the continued & expanded support for the comprehensive End-To-End Monitoring for all applications accessed via Google Chrome for its flagship monitoring solution, CitraTest® APM. Google Chrome is a browser that combines a minimal design with sophisticated technology to make the web faster, safer, and easier (<http://www.google.com/chrome>). Through the deployment of Tevron’s APM solutions for all environments, every application across the enterprise, including applications accessed via Google Chrome, can be accurately measured and actively monitored. Further, Tevron’s unique technology will deliver the ability to enforce all Service Level Agreements (SLAs) for any application deployed via any browser technology. “Because Tevron’s APM solutions are completely independent of the application they are monitoring and how that application is delivered, for the first time, every application across the enterprise can be monitored with one cost effective solution, including all web browser environments. Every organization has numerous applications they need to monitor and our APM solutions can monitor them all. No other vendor offers such vast and all encompassing support. The days in which organizations have to pay a

licensing fee for each application, each protocol they need to monitor, and each methodology of application delivery are over. This will result in the potential savings of millions of dollars in licensing and maintenance fees. Through the use of Tevron's APM solutions, organizations now have one all encompassing solution with one licensing fee that can monitor any and every application across the enterprise. This includes all legacy applications, client server applications, all web browsers, Citrix or Terminal Server hosted applications, XenServer, XenApp, XenDesktop, VMware hosted applications, terminal emulation...every application. This flexibility is a must to meet the demanding needs of today's global enterprises", explains Jay Labadini, Vice President at Tevron.

To learn how CitraTest® APM can assist you with your APM & monitoring requirements, call 1.702.518.7435 or visit www.tevron.com.
