Tevron® Releases v6.5 of the CitraTest APM Web Console & Real-Time Dashboard for Citrix Hosted Applications.

Tevron offers the ONLY testing & monitoring solutions that fully support EVERY enterprise application that is accessible from a Windows based machine. No application is left behind.

Nashua, New Hampshire, June 6, 2007 – Tevron, the global leader in universal monitoring and testing solutions, today announced the release of version 6.5 of the CitraTest APM Web Console & Real Time Dashboard. With the latest release, full support for *Citrix Server Side Analysis* has been introduced. The CitraTest APM Web Console offers web based monitoring of all Citrix Presentation Server farms tracking the key server metrics required to solve potential performance issues. With the addition of server side analysis for Citrix hosted environments, IT Managers can proactively view the performance and availability of every Citrix hosted application across the enterprise. Other features include management level reporting, daily distribution of application performance and availability metrics, and alerting to name a few.

“Through the use of Tevron’s Citrix Monitoring Solutions that analyze not only the Real-User Experience from all customer locations but also analyze the key metrics of the Citrix Server farm, IT Administrators can better monitor access and performance and cost effectively run IT in alignment with company objectives. As a result, Business Managers get an IT environment that is aligned with the business along with increased IT efficiency and profitability,” says Jay Labadini, Vice President.
